

ABSTRACT OF THE DISCLOSURE

This invention relates to a method for achieving a novel solution comprising a high percentage of a piperidinopyrimidine derivative, more particularly minoxidil. The method of the current invention results in a highly effective solution for facilitating hair growth comprising a high concentration of Minoxidil, that is not cosmetically unattractive when applied to a treatment area and that does not cause skin irritation in the treatment area. In another aspect of the invention, said solution comprising high percentage Minoxidil may further comprise co-active ingredients, such as azelaic acid. The present invention also provides a method for stimulating the growth of hair or for preventing hair loss in humans and lower animals.
